Diagnostic & intervention Radiology department

 **15276**

Name	Ahmed Hesham Hassan		Date	6/3/2023
MRN	3303	Ref. Physician	Prof. Dr. Amr Helal	

High Resolution MS-CT CHEST

- Air space opacities with air bronchograms within (consolidation) are present at right upper and middle lobes as well as the left upper lobe with diffuse ground glass centrilobular nodules surrounding the consolidation areas.
- No pleural collection, thickening or calcification.
- Normal cardiac size and configuration.
- Patent tracheo-bronchial tree.
- No pericardial effusion, thickening or calcification.
- Cuts through upper abdomen are unremarkable.

Opinion:

Picture consistent with lobar pneumonia involving both lungs as described above for further clinical and laboratory evaluation and follow up.

Regards,

Mustafa Heidar, M.Sc.
